We currently have our demonstration car under construction and as this progresses we are building a comprehensive stock of build parts, hardware kits and the best quality accessories we can find to complement the Manxter 2+2 kit.

Although the air cooled VW flat four engine is without doubt the most popular choice for dune buggy construction, we are actively researching the popular Subaru engine conversion to bring the Manxter 2+2 bang up to date.

All UK Manxters' will be supplied in right hand drive configuration but left hand drive kits are available upon request.
